

Hi I am Akshatha. I am from Udupi, Karnataka. I completed my engineering in Electronics & Communication from SDM Institute of Technology, Ujire and my PU in PRN Amrutha Bharti College, Hebri. Speaking of family, my mother is a homemaker, father is a farmer and I have 2 elder siblings.

Leading many student groups in various cultural activities, debates & academic projects define me as a natural leader, also making me a quick learner, strong in analytical and people management skills.

My hobbies include dance, singing, music and reading books.

I chose Data Science because I think it a revolutionary technology as it studies data and creates insights. The insights help the companies to make powerful decisions and I want to contribute to that. It is a multi disciplinary field that involves statistics, math and computer science and keeps us always on toes with excitement. Also it is industry agnostic, used everywhere like health-care, banking, consulting, e-commerce and more. It opens abundant job opportunities and experiences. Data Science can make products smarter, can save lives or influence us to become better people. So when it comes to my career path, Data Science it is.
